Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC Arteriosclerosis, atherosclerosis, bursitis, hepatitis and parkinson's CC disease, amyotrophic lateral sclerosis, epilepsy, stroke, Huntington's CC disease, amyotrophic lateral sclerosis, epilepsy, stroke, Huntington's CC disease, multiple sclerosis, dementia and other extrapyramidal disorder. CC motor neuron disorder, prion disease, metabolic disease of the nervous system and other developmental disorders of the central nervous system, cc neuromuscular disorders, metabolic, endoorine and toxic myopathies, CC periodic paralysis, mental disorders including mood, anxiety; and cimmunological disorders include acquired immune deficiency syndrome CC (AIDS), adult respiratory distress syndrome, Addison's disease, CC allergies, asthma, atherosclerosis, osteoporosis, autoimmune haemolytic callergies, asthma, atherosclerosis, osteoporosis, autoimmune haemolytic CC anaemia, autoimmune thyroiditis, Crohn's disease, atopic dermatitis, CC systemic luques erythematosus, systemic sclerosis, ulcerative colitis, chaemodialysis, uveitis; viral, bacterial, fungal, parasitic, protozoal, chaemodialysis, uveitis; viral, bacterial, fungal, parasitic, protozoal, CC haemodialysis, uveitis, polymyositis, arrhythmias and hypertension. The CC raict polynucleotides are used in gene therapy. The present sequence is human TRICH-22 cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         10-AUG-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              protein and polynucleotides are useful for diagnosing and treating disorders related to ataxia. Ataxia gene sequences are useful in gene therapy, and as diagnostic tools or reagents for identifying a characterizing genetic defect involved in the disorders and disease related to ataxia.

The sequence given is the gamma-aminobutyric acid (GABA) A receptor beta-subunit. This sequence is used in an expression plasmid operably linked to the tac promoter, a ribosome binding sequence, the E. coli outer membrane protein Ompr signal peptide coding sequence and a sequence coding for the N-terminal extracellular site of either the gamma-aminobutyric acid (GABA) A receptor alpha-subunit or the glycine receptor alpha-subunit. This expression plasmid can be used to transform E. coli to produce an N-terminal extracellular site protein of ion channel direct binding type receptor.
                                                                                                                                                                                                                                                                                                                                                                                                             prepn. of N-terminal extracellular site protein - l E.coli transformed by a plasmid comprising the tac binding site, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           JP04144683-A

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The patent discloses novel human ion channel polypeptides and their corresponding polynucleotides. The ion channel sequences and their modulators are used for the treatment of viral infections (e.g. human immunodeficiency virus (HIV)); thyroid disorders (e.g., thyrotoxicosis, myxoedema), renal failure, inflammatory conditions (e.g., Crohn's disease), rheumatoid arthritis, autoimmune disorders, pain, stroke, psychotic and neurological disorders (e.g. anxiety, depression and schizophrenia), dyskinesias (e.g. Huntington's disease), degenerative disorders (e.g., Parkinson's disease, Alzheimer's disease), cardiovascular diseases, cancer, metabolic disorders (e.g. anorexia, obesity) and mental disorders. The present sequence is a cDNA encoding human ion channel-93 (ion93) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 554 BP; 158 A; 124 C; 135 G; 137 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents the human ataxia gene. The ataxia protein and polynucleotides are useful for diagnosing and treating disorders related to ataxia. Ataxia gene sequences are useful in gene therapy, and as diagnostic tools or reagents for identifying and characterizing genetic defect involved in the disorders and diseases

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             genes (I) in a test sample or determining the expression profile of a gene group in the sample comprising genes selected from (I). The method is useful for examining the ischaemic condition (e.g. compressive ischaemia, occlusive ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (AB199202 to AB19912, encoding the protein sequences in ABB57020 to ABB57374) or by determining the expression profile of a gene group comprising these genes. The expression levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition improving drugs or therapeutics for ischaemic diseases. AB19913 and AB19914 represent PCR primers for a mouse ischaemic condition related sequence, which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Examining the ischemic condition (e.g. expression levels of particular genes by determining the expression profile genes

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to gamma-aminobutyric acid (GABA)-gated chloride channels and their corresponding nucleic acid molecules. GABA-gated chloride channel proteins and DNA's are useful for preventing and treating tick infestation, particularly in humans, dogs, cattle, horses, deer, or other wild or domesticated animals. The nucleic acids are useful as hybridisation probes or Polymerase Chain Reaction primers for identifying the presence of Dermacentor variabilis GABA-gated chloride channel nucleic acid or DNA's encoding for a GABA receptor. The nucleic acids are also useful for the recombinant expression of D. variabilis GABA-gated chloride channel proteins. GABA-gated chloride channel proteins can be chloride channel proteins. The present sequence is Dermacentor variabilis clone 8 GABA-gated chloride channel proteins. The present sequence is Dermacentor variabilis clone 8 GABA-gated chloride channel proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               animals, comprises the Dermacentor variabilis gamma-aminobutyric (GABA)-gated chloride channel - \,

                                                                                The invention relates to gamma-aminobutyric acid (GABA)-gated chloride channels and their corresponding nucleaks acid molecules. GABA-gated chloride channel proteins and DMA's are useful for preventing and treating tick infestation, particularly in humans, dogs, cattle, horses, deer, or other wild or domesticated animals. The nucleic acids are useful as hybridisation probes or Polymerase Chain Reaction primers for identifying the presence of Dermacentor variabilis GABA-gated chloride channel nucleic acid or DNA's encoding for a GABA receptor. The nucleic acids are also useful for the recombinant expression of D. variabilis GABA-gated chloride channel proteins. GABA-gated chloride channel proteins capture chloride channel proteins capture chloride channel proteins. The present sequence is Dermacentor variabilis clone 5 GABA-gated mites. The present sequence is Dermacentor variabilis clone 5 GABA-gated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gamma-aminobutyric acid; GABA; tick infestation; GABA-gated chloride channel; recombinant expressi

                                                                                                                                                                                                                                                                                                                                                 The invention relates to gamma-aminobutyric acid (GABA)-gated chloride channels and their corresponding nucleic acid molecules. GABA-gated chloride channel proteins and DMA's are useful for preventing and treating tick infestation, particularly in humans, dogs, cattle, horses, deer, or other wild or domesticated animals. The nucleic acids are useful as hybridisation probes or Polymerase Chain Reaction primers for identifying the presence of Dermacentor variabilis GABA-gated chloride channel nucleic acid or DNA's encoding for a GABA receptor. The nucleic acids are also useful for the recombinant expression of D. variabilis GABA-gated chloride channel proteins. GABA-gated chloride channel proteins GABA-gated chloride channel proteins. The present sequence is Dermacentor variabilis clone 9 GABA-gated manual present as mites. The present sequence is Dermacentor variabilis clone 9 GABA-gated channel proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New polypeptide useful for preventing or treating tick infestation, humans, dogs, cattle, horses, deer, or other wild or domesticated animals, comprises the Dermacentor variabilis gamma-aminobutyric aci (GABA)-gated chloride channel

It was isolated from human hippocampus cDNA using a probe generated from rat brain cDNA using primers (see also AAT28996-97) based on the rat delta sequence. The cDNA can be incorporated into a vector and used to direct expression of the delta subunit in transfected cells, partic rodent fibroblasts. Co-transfected host cells capable of expressing the delta, alpha-4, (see also AAB97298) and beta subunits can be used to screen or design
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DNA encoding alpha-4 and delta subunit(s) of the human GABAa receptor - also stably co-transfected eukaryotic cells expressing receptors contg. these subunit(s), used for screening and designing the second control of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A cDNA clone

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Вb
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
The invention relates to an isolated mammalian polypeptide (I), which is CC a mutant of gamma-aminobutyric acid (GABA) receptor subunit. The mutation CC disrupts the functioning of an assembled GABA receptor, its functional CC fragment or homologue, and creates a phenotype of epilepsy, anxiety, manic depression, phobic obsessive symptoms, Alzheimer's disease, CC epilepsy, anxiety, manic depression, phobic obsessive symptoms, Alzheimer's disease, CC Alzheimer's disease, schizophrenia, migraine and/or obesity. (I), the polynucleotide (II) CC useful for treating the above conditions. (I)-(III) are useful in the diagnosis of CC epilepsy, anxiety, manic depression, phobic obsessive symptoms, CC Alzheimer's disease, schizophrenia, migraine and/or obesity. (III) is CC useful for treating the above conditions. (I)-(III) are useful in CC screening of candidate pharmaceutical agents, where high-throughput CC creening techniques are employed. (II) is useful to detect and conditions of the study of the function of a GABA receptor, to study the mechanism of the disease as related to GABA receptor, for the creation of mechanism of the disease as related to GABA receptor, for the creation of
                                                                                                                                                                                                                                                                                                                                                        Mutant

CC insecticidal activity for use in treating parasitic infections in humans correctionals, as hybridisation probes to isolate related genes from other corganisms to establish additional pesticide drug screens and also used in competition. binding experiments or for functional chloride channel cassays to screen for compounds that activate, block or modulate the channel. Heterologous expression of LGIC/GluCl protein allows the pharmacological analysis of compounds active against parasitic in the treatment of tick infestations directly related to Dv. LGIC/GluCl protein acts as targets to identify modulators of the channels, where the condulators act as effective insecticidal, acaricidal, mitacidal and/or compounds active as targets to identify modulators of the channels, where the modulators act as effective insecticidal, acaricidal, mitacidal and/or compounds and human health and/or crop protection. The modulators are useful for treatment or diagnosis of specific disorders. The present sequence is Rhipicephalus sanguineus cascidal cascidal probe which is used for screening Dermacentor LGIC/GluCl 1

                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a purified nucleic acid molecule encoding Dermancentor variabilis (Dv) (American dog tick) ligand gated ion channel/L-glutamate gated chloride channel (LGIC/GluCl) protein.

LGIC/GluCl DNA is useful for identifying a compound that modulates glutamate-gated channel protein activity and for identifying a modulator of LGIC/GluCl channel protein: LGIC/GluCl DNA is used for establishing novel insecticide screens, validate potential lead compounds with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel purified nucleic acid molecule encoding Dermancentor variabilis ligand gated ion channel/L-glutamate gated chloride channel protein, useful for identifying modulator compounds that are useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Tick; acaricide; mitacide; crop protection; nematocide; insecticide; ligand gated ion channel/L-glutamate gated chloride channel; LGIC/GluCl; parasitic infection; pesticide drug screen; tick infection; probe; ss.

The invention relates to gamma aminobutyric acid (GABA)-gated chloride channels and their corresponding nucleic acid molecules. GABA-gated chloride channel proteins and DNA's are useful for preventing and treating tick infestation, particularly in humans, dogs, cattle, horses, deer, or other wild or domesticated animals. The nucleic acids are useful as hybridisation probes or Polymerase Chain Reaction primers for identifying the presence of Dermacentor variabilis GABA-gated chloride channel nucleic acid or DNA's encoding for a GABA receptor. The nucleic acids are also useful for the recombinant expression of D. variabilis GABA-gated chloride channel proteins exert toxic effects on other ticks or related parasites such as mites. The present sequence is Rhipicephalus sanguineus GluCl DNA probe which is used for cloning Dermacentor variabilis GABA-gated chloride
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WO200174884-A1
                                                                                                                                                                                                                                                                                                                                                                                  New polypeptide useful for preventing or treating tick infestation, humans, dogs, cattle, horses, deer, or other wild or domesticated animals, comprises the Dermacentor variabilis gamma-aminobutyric aci (GABA)-gated chloride channel -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           31-MAR-2000; 2000US-193791P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               28-MAR-2001; 2001WO-US09955

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to Rhipicephalus sanguineus (brown dog tick) L-glutamate-gated chloride channel proteins (GluCl and GluCl2) and nucleic acid molecules encoding such proteins. GluCl channel proteins are useful for identifying modulators. The compounds identified as modulators are useful for insecticidal, mitacidal and/or nematocidal treatment for use in animal and human health and/or crop protection. The compounds are also useful in screening for and selecting compounds active against parasitic invertebrate species relevant to animal and human health, including worms, fleas, ticks, mites and lice. Heterologous cell lines expressing functional GluCl1 and GluCl2 channel functional forms are useful for establishing functional or binding assays to identify novel GluCl1 channel modulators. The present sequence is R. sanguineus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAD21396 standard;
                                                                                                                                                                                                                                                                               The invention relates to Rhipicephalus sanguineus (brown dog tick) L-glutamate-gated chloride channel proteins (GluCl1 and GluCl2) and nucleic acid molecules encoding such proteins. GluCl channel proteins are useful for identifying modulators. The compounds identified as modulators are useful for insecticidal, mitacidal and/or nematocidal treatment for use in animal and human health
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 12; Fig
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel L-glutamate-gated chloride channel proteins from Rhipicephalus sanguineus for identifying compounds which modulate the channel proteins, which are useful as insecticides, anthelmintics and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             31-MAR-2000; 2000US-193934P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Rhipicephalus sanguineus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       28-JAN-2002
                                                                                                                                         and/or crop protection. The compounds are also useful in screening for and selecting compounds active against parasitic invertebrate species relevant to animal and human health, including worms, fleas, ticks, mites and lice. Heterologous cell lines expressing functional GLC11 and GluC12 channel functional forms are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       P-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (MERI ) MERCK & CO INC
